                                                                                                   Structure.

SUBUNIT: Component of the multisynthetase complex which is comprised of a bifunctional glutamyl-prolyl-tRNA synthetase, monospecific isoleucyl, leucyl, glutaminyl, methionyl, lysyl, arginyl, and aspartyl-tRNA synthetases as well as three auxil proteins, p18, p48 and p43.

SIMILARITY: Contains 1 GST-like domain.

                                                                                                                                                                                                                                                                                                                                                                 structure. Mediates ubiquitination of FUBP1 and its degradati the proteasome.

SUBUNIT: Component of the multisynthetase complex which is comprised of a bifunctional glutamyl-prolyl-tRNA synthetase, monospecific isoleucyl, leucyl, glutaminyl, methionyl, lysyl, arginyl, and aspartyl-tRNA synthetases as well as three auxil proteins, pls, p48 and p43. Binds FUBP1.

SIMILARITY: Contains 1 GST-like domain.

SIMILARITY: Ref. 1 sequence differs from that shown due to a

FUNCTION: Probable core protein of the multisynthetase complex that serves as a template for the assembly of the supramolecular structure (By similarity).

SUBUNIT: Component of the multisynthetase complex which is comprised of a bifunctional glutamyl-prolyl-tRNA synthetase, the monospecific isoleucyl, leucyl, glutaminyl, methionyl, lysyl, arginyl, and aspartyl-tRNA synthetases as well as three auxiliary proteins, p18, p48 and p43 (By similarity).

SIMILARITY: Contains 1 GST-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (Rel. 40, Last sequence update) (Rel. 46, Last annotation update)

New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

Claim 1; Page; 1017pp; English.

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal

The polynucleotide or the compound that moditates its activity is useful for preparing a medicament for treating CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction CC injury (CCI) and spared nerve injury (SUN) in an animal (e.g. gene CC the specification) which is differentially expressed during pain. Note: CC The sequence data for this patent did not form part of the printed CC specification, but was obtained in electronic form directly from WIPO at CC frn wino.int/ahad.pr. semence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC The invention relates to human tumour-associated antigenic target (TAT) CC polypeptides, and their related nucleic acids. The TAT polypeptides are coverapressed in cancer tissues compared to normal tissues, and may thus CC serve as effective targets for the diagnosis and treatment of cancer in C mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and CC polypeptides; expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic CC molecule which binds to a TAT polypeptide; fusion proteins comprising a TAT polypeptide; and methods and compositions for the treatment or CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful CC for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, CC colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder CC cancer, pancreatic cancer, cervical cancer, cancers of the central CC cancer, pancreatic cancer, cervical cancer, liver cancer shidder CC cancer, melanoma and leukaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome and gene mapping, in CC chromosome identification and in gene therapy. The present sequence CC represents a TAT polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

The JTV1 coding sequence is located upstream from hpMS2. JTV1 cDNA can be used as probes to detect chromosome 7 deletions involving JTV1. Due to the overlapping promoter regions, deletions of JTV1 would also affect PMS2 (a mismatch repair gene) expression, leading to hereditary non-polyposis colorectal cancer. JTV1 can also be used to assay activity or competence of the PMS2 promoter region, the presence of the pmS2 promoter region to be presence of the pmS2 promoter is intact. JTV1 sequences can also
                                                                                                                                                                                                                                                                                                                                                                                          Sequence 312

                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to an isolated p38/JTV-1 protein for use as CC medicament. The p38/JTV-1 protein or the pharmaceutical composition is CC useful as medicament for treating breast cancer, large intestinal cancer, cC lung cancer, small cell lung cancer, stomach cancer, liver cancer, blood CC cancer, bone cancer, pancreatic cancer, skin cancer, head or neck cancer, CC cutaneous or intraocular melanoma, uterine sarcoma, ovarian cancer, blood CC cancer, anal cancer, colon cancer, fallopian tube carcinoma, CC endometrial carcinoma, cervical cancer, vulval cancer, vaginal carcinoma, CC Hodgkin's disease, esophageal cancer, small intestine cancer, endocrine CC cancer, thyroid cancer, parathyroid cancer, adrenal cancer, endocrine CC cancer, urbral cancer, parathyroid cancer, xidrenal cancer, endocrine CC cancer, renal cancer, parathyroid cancer, xidrenal cancer, ureter CC leukemia, lymphocytic lymphoma, bladder cancer, kidney cancer, ureter CC cancer, renal cell carcinoma, renal pelvic carcinoma, CNS tumour, primary CC cancer, thair combination. The protein is useful as a target for CC screening new anticancer agents. The present sequence represents the 1-

CC 312 amino acid sequence of p38/JTV-1 protein.
                                                                                                                                                                                                                                                         Matches 273;
                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                           The invention relates to novel isolated polypeptides, mature form of the polypeptide, a sequence that is 95% identical to the polypeptide or the polypeptide comprising one or more conservative substitutions. The NoVX polypeptide is useful for treating or preventing a pathology associated with the polypeptide e.g. disorders associated with aberrant expression or activity of the polypeptide, such as cancer, diabetes, obesity, and endocrine, CNS and inflammatory disorders. They can also be used in various detection and screening assays, chromosome mapping, tissue typing and predictive medicine. This sequence corresponds to one of the
                                                                                                      Sequence 272 AA;
                                                                                                                                      polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                   Claim 1; SEQ ID NO 226; 772pp;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to an isolated p38/JTV-1 protein for use as CC medicament. The p38/JTV-1 protein or the pharmaceutical composition is CC useful as medicament for treating breast cancer, large intestinal cancer, cuseful as medicament for treating breast cancer, large intestinal cancer, colon cancer, bencer, blood cancer, bone cancer, parcreatic cancer, skin cancer, liver cancer, blood cancer, bone cancer, parcreatic cancer, skin cancer, head or neck cancer, cc cutaneous or intraocular melanoma, uterine sarcoma, ovarian cancer, cc rectal cancer, anal cancer, colon cancer, fallopian tube carcinoma, cc endometrial carcinoma, cervical cancer, sulvil cancer, vaginal carcinoma, cc endometrial carcinoma, cervical cancer, sulvil cancer, vaginal carcinoma, cc undout, urethal cancer, parathyroid cancer, saft tissue tumour, urethral cancer, parathyroid cancer, prostate cancer, soft tissue cumour, urethral cancer, penile cancer, prostate cancer, chronic or acute cleukemia, lymphocytic lymphoma, bladder cancer, kidney cancer, ureter cancer, renal cell carcinoma, renal pelvic carcinoma, CNS tumour, primary CC CNS lymphoma, bone marrow tumour, brain stem nerve gliomas, pituitary cadenoma, or their combination. The protein is useful as a target for screening new anticancer agents. The present sequence represents the 84-312 amino acid sequence of p38/JTV-1 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  X

                                                                                                                                                                                                                                                                                                                            The present invention relates to an isolated p38/JTV-1 protein for use as CC medicament. The p38/JTV-1 protein or the pharmaceutical composition is CC useful as medicament for treating breast cancer, large intestinal cancer, cuseful as medicament for treating breast cancer, large intestinal cancer, lung cancer, small call lung cancer, stomach cancer, liver cancer, blood CC cancer, bone cancer, pancreatic cancer, skin cancer, liver cancer, blood CC cancer, bone cancer, pancreatic cancer, skin cancer, head or neck cancer, cc cutaneous or intraocular melanoma, uterine sarcoma, ovarian cancer, cc endometrial cancer, anal cancer, colon cancer, fallopian tube carcinoma, CC endometrial carcinoma, cervical cancer, wulval cancer, vaginal carcinoma, CC dodgin's disease, esophageal cancer, small intestine cancer, soft tissue cumour, urethral cancer, penile cancer, adrenal cancer, soft tissue CC leukemia, lymphocytic lymphoma, bladder cancer, kidney cancer, ureter CC cancer, renal cell carcinoma, renal pelvic carcinoma, CNS tumour, primary CC cancer, renal cell carcinoma, renal pelvic carcinoma, pituitary CC denoma, nor their combination. The protein is useful as a target for screening new anticancer agents. The present sequence represents the 1-cc carcinoma acid sequence of p38/JTV-1 protein.
                                                                                                                                                                                                                                         Query Match

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL016176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Drosophila; developmental biology; cell signalling; insecticide;

Patent No. 6812339

GENERAL INFORMATION:
APPLICATT: VENTER, J. Craig et al.
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF INTILE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF FILE REFERENCE: CLO01307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT APPLICATION NUMBER: 60/241,755
PRIOR PILING DATE: 2000-04-14
PRIOR APPLICATION NUMBER: 60/241,755
PRIOR FILING DATE: 2000-10-20
PRIOR APPLICATION NUMBER: 60/237,768
PRIOR FILING DATE: 2000-10-03
PRIOR FILING DATE: 2000-09-08
NUMBER OF SEQ ID NUMBER: 60/231,498
PRIOR FILING DATE: 2000-09-08
NUMBER OF SEQ ID NOS: 207012
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 11312
LENGTH: 341
TYPE: PRT
ORGANISM: Human
